1. General Description

The DW8506 is an instant LED driver for low power LED applications. At DW8506 output stage, one regulated current port is designed to provide a uniform and constant current sink for driving LEDs within a large range of V_F variations. DW8506 easily provides users a consistent current source. User may adjust the output current from up to 100mA through an external resistor, R_S , which gives users flexibility in controlling the light intensity of LEDs. In addition, users can precisely.

DW8506 also guarantees that LEDs can be cascaded to maximum 40V at the output port.

■ Pin Description

No.	Pin Name	Description	Note
1	N/C	No connect	
2	GND	Ground	
3	RS	Output current set input. Connect a resistor from RS to GND to set the LED bias current.	
4	VDD	Supply voltage input.	
5	OUT	Output pin. Sink current is decided by the current on R_{SET} connected to RS.	

4. Absolute Maximum Ratings

Symbol	Parameter		Ratings
VDD	Supply voltage		41V
V _{OUT}	Output voltage		23V
VRS	Reference voltage		5V
θ _{JA}	Package thermal resistance	SOT-23-5L	95.03°C/W
T _{OPR}	Operating temperature		-35~+85°C
T _J	Junction temperature		+150°C
T _{STG}	Storage Temperature		-55~+150°C

- Note** 1. θ_{ja} is measured in the convection at Ta=30°C on a high effective thermal conductivity test board(4 Layers, 2S2P) of JEDEC 51-7 thermal measurement standard.
2. PCB dimension is 100x100x1.6mm and 4 layers.

■ Absolute Maximum Ratings

Use of the IC in excess of absolute maximum ratings such as the applied voltage or operating temperature range (T_J) may result in IC damage. Assumptions should not be made regarding the state of the IC (short mode or open mode) when such damage is suffered. The implementation of a physical safety measure such as a fuse should be considered when use of the IC in a special mode when the absolute maximum ratings may be exceeded is anticipated.
